

# Message from the Workshop Chairs

It is our great pleasure to present the MobiHoc 2014 workshops program. On August 11, 2014, seven workshops complement the 15th ACM International Symposium on Mobile Ad-Hoc Networking and Computing at Philadelphia, USA. These workshops are

- MobileHealth: 4th ACM MobiHoc Workshop on Pervasive Wireless Healthcare
- FOMC: The 10th ACM International Workshop on Foundations of Mobile Computing
- The Workshop on Airborne Networks and Communications
- MSCC: The First International Workshop on Mobile Sensing, Computing and Communication
- The Workshop on Interference Alignment
- The Workshop on the Frontiers of Networks: Theory and Algorithms
- WiMobCity: Workshop on Wireless and Mobile Technologies for Smart Cities

The workshops provide focused venues for presenting novel research results on specific topics in a less formal and more interactive setting than the main conference. The topics of the workshops range from foundational theory and algorithms to an applied perspective on hot topics and rapidly advancing technologies. It is hoped that these workshops will bring together researchers from across the world to mingle with each other and take away cross cutting ideas on a variety of areas.

We would like to take this opportunity to thank the workshop organizers, the program committee members of each workshop, as well as the anonymous reviewers, for their diligence and hard work in creating such excellent programs. We sincerely appreciate the support that we received from the MobiHoc 2014 Organizing Committee chaired by Dr. Jie Wu and Dr. Xiuzhen Cheng. We also greatly value the vision and direction provided by the MobiHoc Steering Committee. In particular, we would like to place on record our gratitude to the Steering Committee Chair, Prof. P. R. Kumar, in this regard.

Last, but certainly not least, we thank the workshop authors for their contributions to the workshops, as well as the attendees for their active interest and participation. It is hoped that the workshops will provide inspiration and ideas to foster cutting edge research in the area of wireless communication and networking. We look forward to a successful workshops program!
